1. Abstract

The Examination Invigilation Duty Allocator is a smart web-based system designed to simplify and automate the process of assigning invigilation duties to faculty members during examinations. In many educational institutions, manual allocation of invigilation duties is time-consuming, error-prone, and often leads to uneven workload distribution among staff. This project aims to overcome these challenges by providing an efficient and transparent platform for duty management. The system allows administrators to manage faculty details, examination schedules, room allocations, and duty assignments in a centralized manner. It ensures fair distribution of duties based on availability, department, and workload balance while reducing scheduling conflicts. Faculty members can securely log in to view their assigned duties, exam dates, timings, and hall details. The system also supports notifications and report generation for better coordination and record maintenance. By improving accuracy, saving time, and enhancing administrative efficiency, the Examination Invigilation Duty Allocator serves as a reliable solution for modern examination management in colleges and universities. Faculty members can log in securely using their credentials to check their assigned duties, examination dates, reporting times, room numbers, and other related information. The system can also generate reports, duty charts, and notifications for quick communication and better coordination. It improves transparency by allowing both administrators and staff to access updated information in real time.

2. Module Mapping

(Provide details of how modules are divided among team members.)

Module Name	Assigned Roll Number(s)	Signature
Administration & Duty Allocation Module	2520090226	LAHARI
Exam Scheduling & Room Allocation Module	2520090171	BHANU PRIYA
Invigilation Duty Assignment Module	2520090226	LAHARI
Faculty Dashboard & Notification Module	2520090171	BHANU PRIYA

3. Module Details

(Explain the responsibility of each student concerning their assigned module.)

In this project, the work is divided equally between two students based on different modules. The first student is responsible for the Administration & Faculty Management Module and the Exam Scheduling & Room Allocation Module, which involves managing faculty details, organizing examination schedules, and allocating rooms efficiently while avoiding conflicts. The second student is responsible for the Invigilation Duty Assignment Module and the Faculty Dashboard & Notification Module, which includes assigning invigilation duties to faculty members, developing a user-friendly dashboard for faculty to view their duties, and implementing notification features to keep staff updated. Both students collaborate to ensure the system works smoothly, maintains accuracy, and provides a reliable solution for exam invigilation management.

4. Frameworks / Platforms / Software Used

(List the frameworks, libraries, platforms, or tools you plan to use.)

This project is developed using web technologies such as HTML, CSS, and JavaScript for designing the user interface and creating interactive features. A backend technology like PHP (or Node.js) is used to handle server-side operations and logic. MySQL is used as the database to store faculty details, exam schedules, room allocations, and duty assignments. The system is developed and tested using tools like Visual Studio Code, and it runs on a web browser such as Google Chrome. These technologies together provide a reliable, efficient, and user-friendly platform for managing invigilation duties.
